

Anthony Stephen Aryee

aaryee@smu.edu | [linkedin.com/in/anthony-stephen-aryee](https://www.linkedin.com/in/anthony-stephen-aryee) | Dallas, Texas

SUMMARY: With several years of experience as a full stack engineer in designing, developing, testing or debugging, and maintaining scalable and high-performance Mobile, Web and Backend applications. Skilled in React, Angular, Python, Java Spring Boot, and microservices architecture. Proven leader in delivering projects on time by managing cross-functional teams. Seeking a challenging role to leverage my technical expertise and drive innovation in a dynamic environment.

EDUCATION: **Southern Methodist University** Dallas, TX
Bobby B. Lyle School of Engineering May 2026
Master of Science in Computer Science

RELEVANT COURSES: Software Engineering, Algorithm Engineering, File Organization and Database Management System, E-Commerce, Software Architecture, Mobile Computing and Python for Data Science, AI and Development.

SKILLS: **Technical:** ReactJS, NextJS, Angular, Flutter, JavaScript, TypeScript, Python, Java Spring Boot, Dart, PHP, MySQL, PostgreSQL, NoSQL, GCP Firestore, Firebase, IOS, Android, HTML, Git, AWS, Git-Action, Docker.

Professional: Leadership, Communication, Adaptability, Teamwork and Problem-solving.

Certifications: AI Projects with Python – LinkedIn, Python for Data Science & AI, Development - IBM Coursera, Multi-Cloud & DevOps - The Cloud Bootcamp, Advance Angular - Edx – Microsoft, NodeJS Master-Class – Purple, Customer Service – NASBA LinkedIn, Agile Methodologies - LinkedIn.

ENGINEERING PROJECTS:

University Evaluation API - Software engineering Nov. 2024

- Led the development of a robust API using Python and database system to facilitate the evaluation of academic programs within a specific department. This system streamlined the collection, storage, and analysis of key metrics, including course performance, student feedback, and faculty assessments.
- Collaborated with team members to gather requirements and ensure the system aligned with the department's evaluation goals, resulting in a user-centered solution.
- Directed the team in maintaining project documentation and version control, ensuring clear communication and facilitating smooth progress tracking among all members.

Bus Routes API - Software engineering Oct. 2024

- Mastermind a comprehensive Bus Routes API using Java Spring Boot, enabling efficient route planning, schedule management, and real-time tracking for users.
- Conducted code reviews, promoting best practices and adherence to coding standards.
- Incorporated features such as dynamic route optimization, bus stop information, and timetable integration to improve user experience and operational efficiency.

Database Application - Database Management Oct. 2024

- Developed a relational database using MySQL, implementing complex queries and optimizing performance.
- Identified data redundancy issues and designed an efficient schema to improve data integrity and retrieval speed.
- Worked in a team of four, coordinating tasks and integrating individual components of the application.

WORK EXPERIENCE:

World Ads - Frontend developer. France Oct. 2024 – Present

- Work closely with UX/UI designers to translate visual designs and wireframes into high-quality, fully functional web apps utilizing React-JS and Next-JS.
- Connect the frontend application with backend services through Python RESTful APIs and Next-Auth-JS.

- Participate in agile processes, including daily stand-ups, sprint planning, and retrospectives.
- Use Git and GitHub for version control and team collaboration, including reviewing pull requests and working together on implementing features or fixing issues.

Nafi Properties - Software developer. Dallas, Texas

Aug. 2023 – Sept. 2024

- Developed and maintained Web and Mobile application using Dart, Flutter and Firebase.
- Identify and resolved bugs in the application that improved app reliability, reducing user reported issues by 40%.
- Worked closely with product managers, contributing to brainstorming sessions and integrating feedback into development cycles.

MV-Parts - Full-Stack engineer. Philadelphia, Pennsylvania

Jan. 2020 – Jul. 2023

- Spearheaded the implementation of microservices architecture for RESTful APIs using Java Spring Boot.
- Collaborated with cross-functional team to design, develop, and implement high-quality, scalable mobile app using flutter, dart, and Google Cloud Firestore.
- Debugged and resolved security and performance issues, improving application load times by 30% through refactoring techniques.
- Implemented CI/CD pipelines using Docker, and GitHub Actions, ensuring continuous integration and delivery of software solutions.
- Effectively communicated project updates and challenges during daily stand-ups, leveraging Agile methodology to ensure continuous alignment with team goals, quick course corrections and promote adaptive planning.

Internship Africa - Web Developer. New York City, New York

Feb. 2018 – Dec. 2020

- Designed and developed a high performance web application using Angular and TypeScript.
- Implemented back-end functionality using NodeJS and Express, streamlining data processing and management.
- Resolved cross-browser compatibility issues, ensuring consistent performance across multiple platforms and improving user experience.

iStorezhona - Software Engineer. West Africa

Feb. 2015 – Jan. 2018

- Worked closely with a cross-functional team design, develop and deploy responsive ecommerce website with Angular, utilizing Angular modules, services and components to streamline development and user experience.
- Developed and maintained scalable backend services using NodeJS, implementing RESTful APIs to handle high-traffic requests and integrated with third party services for payment processing.
- Employed BLoC architecture to design and lead the development of cross-platform ecommerce and chat mobile application from ideation to launch, using Dart in the Flutter framework and Google Cloud Firestore.
- Implemented Firebase Cloud Messaging (FCM) for push notifications, adhering to SOLID principles, including the Single Responsibility Principle (SRP), by isolating notification logic from other application functionalities.
- Engineered a robust and scalable bank payment platform that aligned with the company's internal needs, using agile methodology to enhance transaction reliability and overall payment success.

UNIVERSITY INVOLVEMENT:

IEEE - Chapter Member

October 2024 – Present

- Showcased problem-solving abilities by actively contributing online.

INTERESTS:

- **AI, ML and Software development:** Passionate about exploring new algorithms and AI-driven projects.
- **Coaching and Philanthropy:** Enjoy mentoring, sharing knowledge to help others grow and giving back to community.
- **Fitness and Outdoor Activities:** Committed to staying fit through running, various sports and family reunions.
